

Press release

Efficient and ergonomically correct container unloader nominated for the DI Product Award 2007

An innovation that means a significant improvement of both the work environment and the efficiency has given UNIVEYOR A/S a nomination for Danish Industry's Product Award 2007.

"We have developed a new product eliminating the hard and physically wearing work and at the same time making the work with loading and unloading cartons from containers and trailers more efficient," says the Managing Director Ejnar S. Christensen.

"We are of course happy about and proud of the nomination for the DI Product Award 2007. It is a pat on the back to everyone involved in the development of the Empticon. We see the nomination as a recognition of the innovation work it takes for us to be able to make the handling of goods more efficient from the moment they arrive in containers to the company from e.g. the Far East."

With the Empticon the many heavy and undesirable lifts characterizing the traditional way of unloading containers and trailers are history. The machine makes it possible to handle the majority of the unpalletised cartons arriving in containers from e.g. the Far East.

The Empticon can easily and ergonomically correct be controlled by one single operator. Using a wireless control desk the operator can move over 600 cartons per hour and work a whole day at the same workstation – without putting too much strain on the employee.

With the Empticon UNIVEYOR has attained a place in the final, which is taking place at the DI Industrial Policy top meeting on 27 September 2007. Since 1995 the DI Product Award has been given out to innovative Danish companies, who have succeeded in developing outstanding customer solutions.

In this year's competition 31 of the best new products in Denmark have competed to be nominated for the DI Product Award 2007. The DI Business Committee will select the winner, and in the assessment both customer and product news value is emphasized.

The Empticon from UNIVEYOR has been developed in cooperation with CPH Design. Furthermore, five large Danish distribution centers have been following the project and have had great influence on what demands the new machine is to live up to.

UNIVEYOR supplies intelligent logistics- and handling solutions ensuring our customers to be efficient and able to deliver to their customers. Our customers come from a wide variety of industries. Therefore, we are constantly challenged and inspired to develop new and innovative solutions. We have a strong team of committed and experienced experts ensuring that UNIVEYOR sets the agenda in terms of the use of the newest technology.
